

Group 4 Meeting Minutes

Date: 4/19/2023

Agenda:

- 1) GitHub: All members met to ensure GitHub access was working. GitHub is being used by some directly in the IDE, and others through the desktop application on Windows.
- 2) Classes are being divided up amongst the group members. This will be ongoing as we complete more of the minimum viable product.
- 3) Minimum Classes must include GUI, Client, Multithreaded Server, Sending Messages (person to person) and chatLog. The group has decided that the user needs to be able to login via the GUI and have a chat between one other user active. The server needs to be able to handle multiple chats.
